PROFILE

Senior Frontend Engineer with 8 years in the React ecosystem (React, Next.js, TypeScript), building design systems and accessible, responsive web applications. Frontend security (RBAC, OWASP, CSP) has been a specialty since a Master's thesis on client-side web security, alongside backend work in Java Spring Boot and Node.js. Led frontend development of a 150,000-line React and TypeScript enterprise ERP across 12 modules, owning the architecture, coding guidelines and code reviews, and mentoring junior developers. Based in Germany, available immediately.

SKILLS

Frontend: React, Next.js (SSR/SSG), TypeScript, JavaScript, HTML5, CSS3, responsive design, accessibility (WCAG 2.1/2.2, ARIA), performance optimization (Core Web Vitals, Lighthouse, code splitting)

State & Data: Redux Toolkit, RTK Query, TanStack Query (React Query), Zustand, Zod, Drizzle ORM, REST APIs, Microsoft Graph API, jsPDF

Internationalization (i18n): i18next, next-intl, multilingual React applications, AI-assisted translation workflows

UI & Styling: design systems, component libraries, Figma, Ant Design, Tailwind CSS, shadcn/ui, Less, Sass

Auth & Security: MSAL, Microsoft Entra ID, role-based access control (RBAC), CSP, OWASP

Backend: Node.js, Java Spring Boot, MySQL, PostgreSQL

Testing & Debugging: unit, integration and E2E testing, TDD, Jest, Vitest, Cypress, Testing Library, Browser/React/Redux DevTools, code reviews, code auditing

DevOps & Tooling: Git, GitHub Actions, Jenkins, Gitea, Docker, Vite, Webpack, ESLint, Prettier, pnpm, monorepo, CI/CD, Jira

AI Tooling: Claude Code (plan mode, agentic workflows), Cursor, AI code review (CodeRabbit), project rule and skill files, AI SDK, MCP

Leadership: Agile/Scrum, cross-functional collaboration, technical leadership, coding guidelines, mentoring, technical interviewing

PROFESSIONAL EXPERIENCE

Senior Frontend Engineer (Freelance) | 09/2025 – present
Self-employed (remote)

- Built and published @tuhama/translation-manager, an open-source npm package (monorepo) providing an i18n management UI with AI-assisted translation and code-context extraction to speed up localization in multilingual projects.
- Built my Portfolio in Next.js 16 with TypeScript and Tailwind CSS, in English, Arabic and German (next-intl), tested with Vitest and deployed to Vercel through GitHub Actions.
- Contributed to a case management system for a Qatari law firm, now in production testing: built its SharePoint document management in React, Vite, Redux Toolkit and TanStack Query with @azure/msal-react and the Microsoft Graph API (Microsoft Entra ID login), plus its filterable, resizable data tables.
- Building Stromblick (in progress), an open-source dashboard of Germany's electricity market on the Bundesnetzagentur's SMARD open data: a TypeScript monorepo (pnpm, Turborepo) with a React 19 and Vite web app, an Express and Prisma REST API on PostgreSQL, shared Zod schemas, Vitest tests, Docker and GitHub Actions CI/CD.

- AI-first workflow in production work: rule and skill files that encode structural decisions and coding standards, feature planning in Claude Code plan mode, AI review before every commit, CodeRabbit in pull requests and multiple agents reviewing critical code, with production credentials kept away from agents.

Senior Frontend Developer | 02/2021 – 08/2025
BPro ERP · Remote · held alongside government role

- Frontend lead and architect for 4+ years of a 150,000-line React and TypeScript ERP for large companies in the Gulf region: designed the architecture, wrote the coding guidelines and ESLint rules, reviewed and approved every pull request, and mentored four junior developers; interviewed candidates for junior positions.
- Designed the design system (shared page templates and a reusable component library) that over half of the 1,300+ module files build on, across 12 ERP modules such as Sales, Inventory, Finance and HR.
- Built the data layer with Redux Toolkit and RTK Query on a Vite build, and covered critical flows with Jest unit and integration tests and Cypress end-to-end (E2E) tests.
- Built the granular role-based access control (RBAC) system, from permission management screens to permission-filtered routes and navigation.
- Designed and built a custom PDF report engine on jsPDF that renders QtRPT XML report templates, with page bands, data fields, an expression evaluator, rich text, images and barcodes.
- Cut rendering time of 10,000-row reports by 80% with pagination and list virtualization, reduced initial load with code splitting (lazy loading and dynamic imports), and tracked down unnecessary re-renders with React DevTools.
- Integrated frontend workflows into Jenkins CI/CD pipelines with Gitea, working cross-functionally with backend and DevOps teams on automated branch deployments in a Scrum team using Jira.

Head of Analysis and Software Division, IT Department | 2018 – 05/2025
Software Engineer, IT Department | 07/2008 – 2018
Directorate of Finance (government agency) · Homs, Syria

- As head from 2018, led up to four engineers in systems analysis, staff training and software development.
- Built two internal prototypes: a Personnel Portal in Java EE (servlets, JSP, JPA) on MySQL and, from 2018, a Warehouse Management System with a Spring Boot REST API (JWT) and a React and Ant Design frontend.

Freelance Web Developer | 2018 – 2019
Self-employed · alongside government role · React.js websites for freelance clients

Java Developer | 08/2007 – 06/2008
MIDITEC · Damascus, Syria · Java development on MTZ Web, MIDITEC's web-based ERP

EDUCATION

Master of Software Engineering 2020
Al Baath University, Syria
Thesis: Client-side web application security

Bachelor of Software Engineering 2007
Al Baath University, Syria

CERTIFICATES

IBM DevOps and Software Engineering (Coursera specialization) · View credential
Covered Agile/Scrum, CI/CD, Docker and Kubernetes, microservices, TDD/BDD and OWASP application security.

Model Context Protocol (MCP) Mastery (Coursera) · View credential

Advanced Styling with Responsive Design (Coursera) · View credential
