Tuhama Qlyshi

Senior Frontend Engineer | React · Next.js · TypeScript

Neu-Isenburg (Frankfurt Rhine-Main), Germany
+49 163 1955206 | tuhama.gh.qlyshi@gmail.com
Portfolio | LinkedIn | GitHub

PROFILE

Senior Frontend Engineer with 15+ years in software engineering and 8 years in the React ecosystem (React, Next.js, TypeScript), with a strong focus on secure frontends (RBAC, OWASP, CSP), backed by solid backend experience. Led frontend development of a 150,000-line React and TypeScript enterprise ERP across 12 modules, owning the architecture, coding guidelines and code reviews, and mentoring junior developers. Based in Germany, available immediately.

CORE SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, HTML5, CSS3, accessible UI, performance optimization

State & Data: Redux Toolkit, TanStack Query, Zustand, Zod, Drizzle ORM, REST APIs, Microsoft Graph API, jsPDF

Internationalization (i18n): i18next, next-intl, multilingual React applications, AI-assisted translation workflows

UI & Styling: Ant Design, Tailwind CSS, shadcn/ui, Less, Sass

Auth & Security: MSAL, Microsoft Entra ID, role-based access control (RBAC), CSP, OWASP

Backend: Java Spring Boot, MySQL, PostgreSQL

Testing & Debugging: Cypress, Vitest, Testing Library, Browser/React/Redux DevTools, code reviews, code auditing

DevOps & Tooling: Git, GitHub Actions, Jenkins, Gitea, Docker, pnpm, CI/CD, Jira

AI Tooling: Claude Code (plan mode, agentic workflows), Cursor, AI code review (CodeRabbit), project rule and skill files, AI SDK, MCP

Leadership: Agile/Scrum, technical leadership, coding guidelines, mentoring, technical interviewing

PROFESSIONAL EXPERIENCE

Freelance Frontend Engineer 09/2025 – present

Self-employed (remote)

- Built and published @tuhama/translation-manager, an open-source npm package providing an i18n management UI with AI-assisted translation and code-context extraction to speed up localization in multilingual projects.
- Architected a high-performance, secure, multilingual Portfolio using Next.js 16 with TypeScript, Tailwind CSS, and next-intl for English, Arabic, and German, tested with Vitest and deployed to Vercel through GitHub Actions.
- Contributed to a case management system for a Qatari law firm, now in production testing: built its SharePoint document management in React with @azure/msal-react and the Microsoft Graph API (Microsoft Entra ID sign-in), plus its filterable, resizable data tables.
- AI-first workflow in production work: rule and skill files that encode structural decisions and coding standards, feature planning in Claude Code plan mode, AI review before every commit, CodeRabbit in pull requests and multiple agents reviewing critical code, with production credentials kept away from agents.

Senior Frontend Developer 02/2021 – 08/2025

BPro ERP · Remote · held alongside government role

- Frontend lead and architect for 4+ years of a 150,000-line React and TypeScript ERP for large companies in the Gulf region: designed the architecture, wrote the coding guidelines and lint rules, reviewed and approved every pull request, and mentored four junior developers; interviewed candidates for junior positions.
- Designed the shared page templates and component library that more than half of the 1,300+ module files build on, across 12 ERP modules including Sales, Purchase, Inventory, Finance and HR.

- Built the granular role-based access control (RBAC) system, from permission management screens to permission-filtered routes and navigation.
- Designed and built a custom PDF report engine on jsPDF that renders QtRPT XML report templates, with page bands, data fields, an expression evaluator, rich text, images and barcodes.
- Kept large reports responsive with pagination and list virtualization, cut initial load with lazy loading and dynamic imports, and tracked down unnecessary re-renders with React DevTools.
- Integrated frontend workflows into automated Jenkins CI/CD pipelines with Gitea version control, working with backend and DevOps teams to enable smooth automated branch deployments.
- Worked in a Scrum team with daily stand-ups, picking up and tracking tickets in Jira.

Head of Analysis and Software Division, IT Department 07/2008 – 05/2025
Directorate of Finance (government agency) · Homs, Syria

Headed the software division of a regional finance directorate, covering systems analysis, staff training on national tax systems, and internal software prototypes.

- Led a division of up to four engineers in systems analysis and internal software development.
- Trained finance staff on nationwide tax systems procured from software vendors and used across Syria, where processing errors carry legal liability.
- Designed and built two internal prototypes: a Personnel Portal in Java EE (servlets, JSP, JPA) on MySQL, and, from 2018, a Warehouse Management System with a Spring Boot REST API secured by JWT and a React and Ant Design frontend.

Freelance Web Developer 2018 – 2019
Self-employed · alongside government role

- Built websites for freelance clients with React.js.

Java Developer 08/2007 – 06/2008
MIDITEC · Damascus, Syria

- Trained and worked as a Java developer on MTZ Web, MIDITEC's web-based ERP, including its time recording and access control module, directly after graduation.

EDUCATION

Master of Software Engineering 2020
Al Baath University, Syria
Thesis: Client-side web application security

Bachelor of Software Engineering 2007
Al Baath University, Syria

CERTIFICATES

IBM DevOps and Software Engineering (Coursera specialization) · View credential
Covered Agile/Scrum, CI/CD, Docker and Kubernetes, microservices, TDD/BDD and OWASP application security.

Model Context Protocol (MCP) Mastery (Coursera) · View credential

Advanced Styling with Responsive Design (Coursera) · View credential
