PROFILE

Senior Frontend Engineer with 15+ years in software engineering, specializing in React, Next.js, and TypeScript, with hands-on backend experience in Java (Spring Boot, Java EE) and MySQL. For more than four years I was the frontend lead and architect of an enterprise ERP: a 150,000-line React and TypeScript codebase across 12 business modules, where I set the architecture and coding standards, reviewed every pull request, and mentored four junior developers. Master's thesis on client-side web application security; creator of an open-source i18n tool for multilingual React apps. Based in Germany on a Chancenkarte, available immediately and eligible to switch to an EU Blue Card in-country upon hire.

CORE SKILLS

Frontend: React, Next.js (App Router), TypeScript, JavaScript, HTML5, CSS3, responsive and accessible UI, right-to-left (RTL) layouts

State & data: Redux Toolkit, RTK Query, Zustand, Dexie.js, REST APIs, Microsoft Graph API

Performance: Code splitting with lazy loading and dynamic imports, list virtualization, pagination, React DevTools profiling

i18n: next-intl, i18next, English, Arabic, and German interfaces, AI-assisted translation workflows

UI & styling: Tailwind CSS, Ant Design, shadcn/ui, Framer Motion, Sass

Auth & security: MSAL (@azure/msal-react), Microsoft Entra ID, role-based access control (RBAC), Content Security Policy, JWT, OWASP

Reporting: jsPDF, custom PDF report generation

Backend: Java Spring Boot, Java EE (servlets, JSP, JPA), MySQL

Testing & quality: Vitest, Testing Library, Cypress, ESLint, code reviews

DevOps & tooling: Git, GitHub Actions, Jenkins, Gitee, Docker, Vercel, pnpm, CI/CD

AI tooling: Model Context Protocol (MCP), LM Studio, AI-assisted development with Cursor

Leadership: Frontend architecture, coding standards, code review, mentoring, user training, project planning

PROFESSIONAL EXPERIENCE

Freelance Frontend Engineer

09/2025 – present

Self-employed · Remote

- Built and published [@tuhama/translation-manager](#), an open-source npm CLI and local UI that scans React code for translation keys and sends the surrounding code to OpenAI, Gemini, or Google Translate for context-aware translations.
- Contributed to a case management system for a Qatari law firm, now in production testing: built its SharePoint document management in React with [@azure/msal-react](#) and the Microsoft Graph API (Microsoft Entra ID sign-in), plus the filterable, resizable data tables.

Senior Frontend Developer

02/2021 – 08/2025

BPro ERP · Remote · held alongside the government role

- Frontend lead and architect of an enterprise ERP aimed at large companies in the Gulf region: a 150,000-line React and TypeScript codebase. Designed the architecture, wrote the coding guidelines and lint rules, and reviewed and approved every pull request.
- Mentored four junior developers, two at a time, on UI architecture, performance, and maintainability.
- Designed the shared page templates and component library that more than half of the 1,300+ module files build on, across 12 ERP modules including Sales, Purchase, Inventory, Finance, and HR.
- Built the granular role-based access control (RBAC) system, from permission management screens to permission-filtered routes and navigation.
- Designed and built a custom PDF report engine on jsPDF, with page bands, data fields, an expression evaluator, and drawing for rich text, images, and barcodes.
- Kept large reports responsive with pagination and list virtualization, cut initial load with lazy loading and dynamic imports, and tracked down unnecessary re-renders with React DevTools.

- Integrated frontend workflows into Jenkins CI/CD with Gitee, working with backend and DevOps teams on automated branch deployments.

Head of Analysis and Software Division, IT Department

07/2008 – 05/2025

Directorate of Finance (government agency) · Homs, Syria

- Led a division of up to four engineers in systems analysis and internal software development.
- Trained finance staff on nationwide tax systems procured from software vendors and used across Syria, where processing errors carry legal liability.
- Designed and built two internal prototypes: a Personnel Portal in Java EE (servlets, JSP, JPA) on MySQL, and a Warehouse Management System with a Spring Boot REST API secured by JWT and a React and Ant Design frontend.

Java Applets Programmer

08/2007 – 05/2008

MIDITEC · Damascus, Syria

- Trained and worked as a Java programmer on MTZ Web, MIDITEC's ERP product, directly after graduation.

EDUCATION

Master of Software Engineering

2014 – 2020

Al Baath University, Syria

Thesis: Client-side web application security

Bachelor of Software Engineering

09/2002 – 07/2007

Al Baath University, Syria

CERTIFICATES

- **IBM DevOps and Software Engineering** (Coursera specialization) · [View credential](#)
CI/CD, DevOps, cloud deployment, OWASP application security, Bash scripting, and the software development life cycle.
- **Model Context Protocol (MCP) Mastery** (Coursera) · [View credential](#)
- **Advanced Styling with Responsive Design** (Coursera) · [View credential](#)
